

K-Vendor 360

INTELLIGENT V-HUB · CPQ

USER MANUAL & FEATURE GUIDE

K-Vendor 360

Intelligent V-Hub

**AI-Powered Vendor Risk, Performance & Lessons-Learned Platform
for CPQ and Participating K-Companies**

"Where Quality Meets Qualification"

Complete User Manual

Advisory intelligence only. K-Vendor 360 does not approve, reject, blacklist, Q-List, or rank vendors. The CPQ Team supports the process; the Central Pre-Qualification Committee (CPQC) and the KPC Higher Purchasing Committee (KPCHPC) retain all decision authority. All data shown in the platform is fictional mock data for demonstration.

Document: K-Vendor 360 — User Manual & Feature Guide

Audience: CPQ Admin · CPQ Reviewer · K-Company Representative · Technical Evaluator · HSE/Quality Reviewer · Executive Viewer

Prepared for: Central Pre-Qualification Committee, Kuwait Oil Sector · Innovation Committee demonstration

Contents

1 Introduction & Purpose

One-click committee pack

15 Exporting, Sharing & Access

PDF, email, live link

16 Measurable Pilot KPIs

How value is tracked

17 Glossary & Abbreviations

18 Prototype Notes & Next Stages

1 Introduction & Purpose

K-Vendor 360: Intelligent V-Hub is a secure, executive-level platform that helps the Central Pre-Qualification Committee (CPQ) evolve from a static prequalification function into a living vendor-intelligence hub serving all K-Companies.

It connects vendor performance, project history, Root Cause Analysis (RCA) findings, lessons learned, risk signals, capabilities and future technology gaps in one controlled platform — so CPQ and the K-Companies can avoid repeating mistakes, detect vendor risk earlier, reuse lessons, identify stronger vendors, and prepare for future capability needs.

The business message

- **Avoid duplicated mistakes** — a failure recorded by one K-Company becomes visible (as a lesson) to all.
- **Detect risk earlier** — evidence-based signals are surfaced for human review before award decisions.
- **Reuse lessons learned** — every RCA becomes a searchable preventive question and checklist item.
- **Identify stronger vendors** — capability matching finds qualified alternatives across categories.
- **Prepare for the future** — innovation radar and gap map highlight where capability is thin.

Who uses it

Six roles are supported: CPQ Admin, CPQ Reviewer, K-Company Representative, Technical Evaluator, HSE/Quality Reviewer, and Executive Viewer. You choose your role at sign-in.

2 Important Governance Rules

Read this first. It defines what the system does — and deliberately does not — do.

The platform is advisory only

K-Vendor 360 **does not approve, reject, blacklist, Q-List, or rank vendors automatically**. It surfaces evidence-based signals for human review. The **CPQ Team** prepares recommendations; the **Central Pre-Qualification Committee (CPQC)** and the **KPC Higher Purchasing Committee (KPCHPC)** make all decisions.

Every AI insight is transparent

Wherever the platform shows a signal, risk or pattern, it also shows:

- **Source evidence** — the RCA, feedback or document it came from;
- **Confidence level** — a percentage indicating strength of the signal;
- **Date** — when the evidence was recorded;
- **Reviewer status** — whether a human has reviewed and confirmed it.

You will see a persistent "**Advisory intelligence only**" banner at the top of every page, and an "⚠ **Advisory**" stamp on insight cards.

Mock data

All vendors, scores, RCAs and contacts shown in the prototype are **fictional**. Real CPQ category names and scope-of-work text are included for realism only.

3 Getting Started

Signing in

- 1 Open the platform. You will see the "**Where Quality Meets Qualification**" sign-in screen.
- 2 The demo email and password are pre-filled — in the prototype, **any credentials work**.
- 3 Under "**Sign in as**", choose the role you are presenting as (e.g. Executive Viewer for management).
- 4 Click **Sign in securely →**. You can also use the mock **KPC SSO** or **Microsoft 365** buttons.

Your session is remembered, so you stay signed in if you reload. To return to the login screen, click "↔ **Sign out**" at the bottom of the left sidebar.

Switching role on the fly

Use the **role selector** at the top-right (next to your avatar) to switch persona at any time without signing out.

Navigating

The left sidebar groups every module into three areas:

Intelligence	Strategy & Foresight	Assurance
Executive Overview	Capability Matching	Governance & Audit
Vendor 360 Profiles	Innovation Radar	Evidence Pack Generator
Categories & Scope	Capability Gap Map	
Intelligent Risk Engine		
Lessons-Learned		
Capture Record		

The **global search** box at the top jumps to vendors, RCAs, lessons or technologies. On a phone or tablet, tap the  button to open the sidebar.

4 Executive Overview

A plain-language snapshot for management — how many vendors are watched, where risk and repeated failures are emerging across K-Companies, and the value the platform delivers.

What you see

- **KPI cards** — total vendors monitored, K-Companies connected, high-risk vendors flagged, repeated failure patterns, lessons captured, vendors with missing due-diligence, new capability gaps, average review time saved.
- **Repeated failures — same vendor, more than one K-Company** — the strongest signals: the same problem reported independently by different K-Companies.
- **K-Company feedback radar** — average performance feedback by dimension (Delivery, Quality, HSE, Communication, Cost, Technical).
- **Vendor x K-Company feedback heatmap** — the score each K-Company reported per vendor (green ≥ 80 , amber 60–79, red < 60).
- **Pilot KPI scorecard** and a **priority watch-list** of the highest-signal vendors.

Click to see evidence

Click any red "**Repeated failures**" card to open a drawer showing, for each K-Company, the RCA reference, the root cause, and that K-Company's own feedback — with a link to the source document.

5 Vendor 360 Profiles

One controlled, searchable profile per vendor — connecting performance, history, HSE, quality, RCA links, lessons and due-diligence questions across every K-Company.

Searching & filtering

- 1 **Search / pick vendor** — type a name (type-ahead) or pick from the dropdown list.
- 2 **Status** — Qualified, Not Qualified, Under CPQ Review, Subcontractor, SME, or Not Categorized.
- 3 **Country** — filter by the vendor's country.
- 4 **CPQ Category** → **Scope of work** — choose a category, then its scope cascades; pick a scope to see only vendors qualified in it. Includes a "**Not categorized**" option for registered vendors not on a CPQ list.
- 5 Click a row to open the profile. **Clear** resets all filters.

Inside a profile

CPE score & trend: Contractor Performance Evaluation, quarterly. Bars turn red below 60%.

Q-List status: Active, Under monitoring, or RCA → Q-List candidate (see Glossary).

5 qualification criteria: Commercial, Technical, Financial, HSE, QA/QC pillars.

Also monetary class, category code, K-Companies served, HSE observations, quality non-conformances, delay incidents, **shown** financial & ownership flags, subcontractor dependency, RCA links, lessons, recommended due-diligence questions, reviewer notes and evidence attachments.

Export & share

At the bottom of each profile:

-  **Export PDF** — prints just that profile (save as PDF in the print dialog).
-  **Email** — opens your mail app with a ready-written vendor summary.
-  **Generate evidence pack** — builds the full committee pack (Section 14).

Understanding CPE

CPE = Contractor Performance Evaluation. A quarterly score from 0–100%. Below 60% in a quarter is unsatisfactory; below 60% for three consecutive quarters triggers an RCA and possible Q-List review.

6 Categories & Scope of Work

The official CPQ category directory — 38 categories and 205 subcategories with their real codes (e.g. K 35.08) and full scope-of-work text.

How to use

- 1 Pick a **Category** (e.g. K 35 — Administration).
- 2 Pick a **Subcategory** (e.g. K 35.08 — Manpower Supply Services), or leave on "All".
- 3 Read the official **scope of work** and see **who is qualified** in that subcategory.

Or use the single **search box** to match by **code** ("K35.08"), **scope keyword** ("manpower"), or **vendor name** ("Nordic") across all subcategories at once.

Each subcategory shows its code, an availability flag (✓ Criteria available / Not currently available), the scope text, and a table of qualified vendors (status, K-Companies, CPE). Empty subcategories show a "no qualified vendor — scouting" prompt linking to the Gap Map.

7 Intelligent Risk Engine

Seven AI-generated risk dimensions per vendor. Every signal carries source evidence, a confidence score, a recommended CPQ action and a human-reviewer status. Signals inform — they never decide.

The seven dimensions

Delivery Financial HSE Quality Technical Capability Repetition Data Completeness

How to read it

- **Risk heatmap** — vendors down the side, the seven dimensions across the top, each cell coloured Low (green) / Medium (amber) / High (red). Hover a cell for the vendor & dimension.
- **Signal cards** — each shows the source evidence, a confidence % bar, the recommended CPQ action, and whether a reviewer has confirmed it.

Aligned to the Q-List rule

Signals align to the CPQ rule: CPE below 60% for three consecutive quarters → RCA → Q-List review. Colours are advisory only — reviewed by humans before any CPQC action.

8 Lessons-Learned Intelligence

Turns scattered RCA findings into searchable, reusable intelligence. The AI clusters repeated root causes into themes and converts each lesson into a preventive prequalification question and a checklist item.

Filtering the library

Use any combination of:

Search Vendor CPQ Category K-Company Incident type Project type

The **Project type** list is built from CPQ scopes and includes Consultancy, Tank Maintenance, Manpower Supply, Inspection/NDT, HVAC, Electrical, Pipeline, EPC, Catalyst Handling and more. **Clear** resets all filters.

What each row gives you

- The RCA reference, vendor, K-Company, incident type, root cause and theme;
- A ready-made **preventive prequalification question** and a **checklist item** for future PQ.

Records you add via **Capture Record** appear here automatically, tagged **NEW**.

9 Capture Record (Data Entry)

The platform's intake form — log a contractor failure, RCA, lesson learned or performance observation. Records are saved and flow into Lessons-Learned.

Filling the form

- 1 **Record type** and **date**.
- 2 **Originating entity** — CPQ/CPQC or a K-Company (a record can come from CPQ itself).
- 3 **Contractor / vendor** — pick from the list or choose "Other" to enter a new name.
- 4 **Contractor role** — Main Contractor or Subcontractor — and **Registration status**.
- 5 **Is this under a CPQ category?** (required) — **Yes** reveals Category → Scope of work; **No** reveals a Participation basis (e.g. public tender, later participation) for a vendor that is registered but not CPQ-listed.
- 6 **Failure / issue type** — tick all that apply: Performance, Time/Delay, Manpower Supply, Communication, Attitude, Fraud/Integrity, HSE, Quality, Financial, Subcontractor, Scope, or Other (with a free-text box).
- 7 **Title**, root cause, incident description and recommended preventive action.
- 8 **Submitted by (data feeder)** — full name, department, email and extension (all required; remembered for next time).
- 9 Click **+ Save record**.

After saving

The record appears in the on-page Captured Records table, flows into Lessons-Learned (tagged NEW), increments the "lessons captured" KPI, and is marked "Pending review" — advisory only, for the CPQ reviewer.

Note: in the prototype, captured records are stored in your browser only. A live deployment would use a shared database.

Match a requirement to CPQ scopes & qualified vendors, or build a tailored, multi-category tender scope of work.

① Match a requirement

- 1 Type an operational challenge (e.g. "storage tank maintenance and cleaning"), or
- 2 Select a **Category** → **Scope of work** for a precise match, then read the results.

Results show the **best CPQ categories / sub-scopes to publish to** (ranked, best match first), the **qualified vendors** in those scopes, **capability gaps**, and required evidence and risk notes. Each scope has a "📢 Prepare advert" action mirroring the CPQ publication process.

③ Build a tender (multi-category)

- 1 Add scopes individually with "+ Add to tender", or **seed** several at once from a previous K-Company contract (brief scope only).
- 2 Give the tender a title and click "⚙️ Generate tender scope of work".

The compiled draft includes a **combined scope of work** (each subcode with a brief), and an intelligent **delivery strategy**: a vendor coverage matrix (who covers how many scopes), a **main contractor** recommendation if one vendor covers all, or a suggested **consortium / package split** if not — plus capability gaps. Export it as PDF or email it.

A simulated scan of global patents, research papers, startups and emerging oil-and-gas technologies — surfaced as decision-ready cards.

Each technology card (AI inspection, predictive maintenance, hydrogen safety, robotics, corrosion monitoring, digital refinery, emissions reduction, advanced turnaround planning, drone survey) shows its **relevance** to the Kuwait oil sector, a **maturity level**, candidate **vendors/startups**, and a **recommended next action**. Use it to anticipate where CPQ may need to open new categories or scout vendors.

12 Capability Gap Map

A 3–5 year view of vendor supply versus future demand.

- **Supply-vs-demand heatmap** — current vendor availability against future required capability, flagged Healthy / Tighten / Shortage.
- **Recommended scouting priorities** — the shortage areas to act on first.
- **Emerging categories** CPQ may need to open (proposed category codes).

Capability gaps surfaced elsewhere (e.g. an empty subcategory in Categories & Scope, or a tender gap) [link here](#).

Full traceability for every insight, plus the Kuwaiti legal framework the platform operates within.

Audit trail

For each insight the trail records: data source, K-Company origin, reviewer name, date reviewed, the AI insight, the human decision, committee notes and the final action. It is exportable as a PDF evidence pack.

Regulatory & legal compliance (Kuwait)

Reference	What it covers
Public Tenders Law No. 49 / 2016 قانون المناقصات العامة رقم ٤٩ لسنة ٢٠١٦	Governs public procurement & tendering in Kuwait, administered by CAPT — fair competition, prequalification eligibility, conflict-of-interest.
KPC / KNPC Tendering By-Law	Article 13 — single-source approval authority & monetary thresholds; aligns CPQ qualification with KPC governance.
Related-party & common ownership تشابه الملاك	Bidders with common ownership/management may not compete as independent parties in the same tender.

A **common-ownership / related-party screening** table flags vendors that share an ultimate owner or director, or that need re-screening after an ownership change — advisory, for Legal/CPQC to verify.

Assembles a single, committee-ready "Vendor Intelligence Evidence Pack".

- 1 Open **Evidence Pack Generator** (or click "Generate evidence pack" inside a Vendor 360 profile).
- 2 Select the vendor and click **Refresh preview**.
- 3 Review the eight sections, then click  **Export as PDF** and choose "Save as PDF".

The pack contains: (1) Vendor 360 summary & criteria, (2) risk indicators, (3) RCA history, (4) lessons learned, (5) recommended CPQ due-diligence questions, (6) capability gaps, (7) reviewer comments, and (8) the audit trail — closing with the advisory disclaimer.

15 Exporting, Sharing & Access

Export to PDF

Vendor profiles, tender drafts, evidence packs, the audit trail and pattern-evidence drawers all have an **Export PDF / print** action. It opens your browser's print dialog — choose **"Save as PDF"** as the destination. On iPad Safari: Share → Print → Save to Files.

Email

The ✉ **Email** buttons open your mail app with a ready-written summary. Note: a browser email link cannot auto-attach a file — export the PDF first, then attach it to the email.

Opening on another device

The platform is a single self-contained file — it opens in any modern browser and works offline. It can also be hosted on a private/internal link for tablet and committee access.

Confidentiality

If the platform is published to a public link, real internal scope-of-work text and document references become visible. For confidential use, host it privately.

16 Measurable Pilot KPIs

The Executive Overview tracks the pilot against its FY 2026/2027 targets.

KPI	Target
Reduction in manual vendor-history review time	30–40%
RCA / lessons-learned records converted to searchable intelligence	50–100
Recurring vendor failure patterns detected	5
High-risk vendor signals flagged	10
Alternative vendors identified for selected categories	5–10
Pilot vendor reviews supported by an evidence pack	100%

17 Glossary & Abbreviations

Term	Meaning
CPQ	Central Pre-Qualification (Team) — the advisory/secretary function.
CPQC	Central Pre-Qualification Committee — the decision body (members: VP of HPC, Commercial Managers of each K-Company, CPQ Team as secretary).
KPCHPC	Kuwait Petroleum Company Higher Purchasing Committee — final approval authority.
CPE	Contractor Performance Evaluation — quarterly 0–100% score. <60% for 3 consecutive quarters → RCA → Q-List review.
Q-List	Quarantine List — vendors flagged for poor performance (decision by CPQC + KPCHPC).
RCA	Root Cause Analysis — investigation of a failure or poor performance.
5 criteria	Commercial, Technical (Pool of Experts — KOC/KNPC/KIPIC), Financial, HSE, QA/QC.
Category codes	K = Common Contractor, KM = Common Manufacturing, KS = Specialized Contractor, KSM = Specialized Manufacturing, SME = Small & Medium Enterprise.
Monetary class	N (≤ 75 K KD) → G → F → E → D → C → B → A → M (Mega, >500M KD).
K-Companies	KNPC, KOC, KIPIC, KGOC, PIC, KOTC, KUFPEC, KPC, Q8.
CAPT	Central Agency for Public Tenders (الجهة المركزي للمناقصات العامة).

This is an innovation prototype for demonstration. The following are known limitations and natural next stages for a production build.

- **Data storage** — captured records and sign-in are stored in the browser only. A live system needs a shared, secured database so records sync across users and devices.
- **Email attachments** — the email action pre-writes a summary; attaching the PDF is a manual step. A backend mail service would enable one-click "email with PDF attached".
- **Free-text matching** — capability matching uses keyword matching; the Category → Scope selection is the precise path. A semantic engine is a future enhancement.
- **Integrations** — a production build would connect to Maximo, the vendor registration portal, and K-Company performance feeds.
- **Data confidentiality** — real vendor and scope data must be handled under the appropriate access controls and confidentiality classification.

Remember

Throughout, K-Vendor 360 remains an **advisory intelligence layer**. CPQC and KPCHPC retain all decision authority.
